SOLUTIONS™**

Before you reach for another bottle...

Consider the Cost!

- Billions of barrels of oil are used to produce plastic water bottles each year in the U.S.
- Over 30 billion non-biodegradable plastic water bottles end up in our landfills annually.
- Plastic water bottles can leach harmful chemicals into your drinking water.
- Some bottled water is just tap water.
- Americans spend over \$10,000,000,000.00 per year on bottled water.

Better for you, the planet, and your budget.

Linis home drinking water systems turn tap water into pure delicious drinking water for just pennies a day!

In addition to great drinking water:

- Cook better vegetables, soups, pasta, rice, or anything that uses water.
- Coffee, tea and other hot or cold beverages never tasted better!
- Connect to your refrigerator for perfect ice and cold dispensing.
- Designer faucets available to match your décor.

While today's tap water can contain a broad range of impurities and contaminants, Linis Reverse Osmosis systems tackle the broadest spectrum of water impurities possible. Only RO filtration is capable of reducing impurities ranging from bacteria and viruses to agricultural run-off products like pesticides and fertilizers, to dissolved metals like lead, arsenic and iron. Studies have shown that RO technology is one of the more effective technologies at reducing trace contaminants like perfluorocarbons and trace pharmaceuticals.

Eliminate Plastic Bottles

When you're on the go, fill a reusable sport bottle with healthy and delicious water from a Linis water purification system.
